TOPIC 2 · 20 MIN · DOCS · SITES · SLIDES · SHEETS

Lab 7: Sites: Spark Writes the Website, You Build and Publish It

> Sites is not on Spark's list of apps. So it writes every word, and you keep your hands on the Publish button.

Your goal

Develop approved website content in Docs and integrate it with your deck and chart in Google Sites (LO2).

The story so far

The website goes live on 1 Feb 2027. Spark cannot edit Google Sites, so you assemble it yourself from copy that traces to your inventory, with your deck and chart embedded.

You will deliver

- ☐ Northstar-Site-Copy in Docs, with a claim-to-source table
- ☐ Your Northstar website in Google Sites, checked at phone width

Before you start

A personal Google Account on Google AI Pro or Ultra, age 18+, Keep Activity and Personal Intelligence on. A laptop with Chrome. Copy every prompt from labs/prompts.html, or from the course prompts page: https://tertiarycourses.github.io/TGS-2026064173-AI-Agents-with-Gemini-Spark/labs/prompts.html

Your mock data

File in data/	What it is
northstar-content-inventory.csv	Approved and prohibited claims. Spark may only use these.
website-brief.docx	The starter brief: audience, sections, tone and definition of done.
client-reviews.csv	Made-up reviews with permission flags.
assets/northstar-logo.png	Fictional logo.
assets/northstar-hero.png	Fictional hero image for your site.

Steps

Step 1. Docs: write the copy with its sources (6 min)

Where: Gemini → Task, then Google Docs

Attach website-brief.docx, client-reviews.csv and the inventory, then paste the prompt.

PROMPT · COPY FROM THE LAB PROMPTS PAGE

```
@northstar-writer Create a Google Doc named Northstar-Site-Copy in my Gemini Spark
Workspace/Northstar folder, following the attached website brief: hero, services,
approach, proof, contact.
Use only reviews marked permission = yes, with no surnames.
End with a table listing each claim and the inventory row or file it came from.
```

Expect: Five sections and a table tracing every claim. The review without permission is left out.

You decide: Strike any claim you cannot trace.

Step 2. Sites: build it yourself (10 min)

Where: sites.google.com

Create a blank site named Northstar Studio. Add the logo and hero image, and paste your five sections. Insert your deck with Insert → Slides and the Trend chart with Insert → Charts. Add a button labelled Request a 20-minute discovery call.

Expect: A one-page site with your approved copy, the embedded deck and the live chart.

You decide: Publish only if you are happy for it to be public. A preview link is enough here.

Step 3. Test at phone width and take your evidence (4 min)

Where: Google Sites Preview, then Chrome

Click Preview and open the site in a Chrome tab. Press F12 (Mac: Option+Cmd+I) and click the device toolbar icon to pick a phone. This is only Chrome's built-in view: no code, no install.

Expect: Text is readable, the menu collapses, the button is visible, and the deck still fits.

You decide: Take the PP Task 2 screenshot only when you would show this page to a client.

Checkpoint

Every claim traces to the inventory, the review without permission is left out, and the site works at phone width.

Assessment evidence

PP Task 2: ONE screenshot of your finished website in the browser with the Chrome device toolbar set to a mobile viewport.

If you finish early, or after class

• Ask Spark to compare your live site text against the inventory, row by row, and list any mismatch.

• Build the page a second way: in a Chat, open Canvas from the + button, add your approved Doc from Drive, and ask for a one-page responsive site using only that text. Compare it with your Google Site.

If Spark does not behave as described

Menus move and results vary, so this lab states what to expect and not exact wording. Check the source in Google Help, tell your trainer, and record what you actually saw. No Pro or Ultra account in class? Pair with a neighbour and complete the Docs, Sheets and Sites templates by hand.

All company data in this lab (Northstar Studio, people, enquiries, reviews, numbers) is fictional and generated for training.
