TOPIC 2 · 60 MIN · SHEETS · SLIDES · DOCS · SITES · DRIVE

Lab 2: Build the Launch Kit in Sheets, Slides, Docs and Sites

> One skill, one approved fact list, four Google apps. You finish with a dashboard, a deck and a website that all say the same thing.

Your goal

Teach Spark your voice as a skill, then develop consistent content across Sheets, Slides, Docs and Sites from one approved inventory (LO2).

The story so far

Launch is close and your facts live in three places. You need a dashboard to see where enquiries come from, a capability deck for client meetings, and a website that goes live on 1 Feb 2027. Spark builds the first two and writes every word of the third. Google Sites is not on Google's list of apps Spark can edit, so you assemble the site yourself: that is your hands, your judgement and your Publish button.

You will deliver

- ☐ northstar-writer skill on your Skills page
- ☐ Northstar-Launch-Dashboard in Sheets: 23 leads, formulas and a chart
- ☐ Northstar-Capability-Deck in Slides: 6 slides with the Sheets chart
- ☐ Northstar-Site-Copy in Docs, with a claim-to-source table
- ☐ Your Northstar website in Google Sites, checked at phone width

Before you start

A personal Google Account on Google AI Pro or Ultra, age 18+, Keep Activity and Personal Intelligence on. A laptop with Chrome. Copy every prompt from labs/prompts.html, or from the course prompts page: https://tertiarycourses.github.io/TGS-2026064173-AI-Agents-with-Gemini-Spark/labs/prompts.html

Your mock data

File in data/	What it is
northstar-content-inventory.csv	The single source of approved and prohibited claims.
northstar-writer-skill.txt	Paste this into Create manually on the Skills page.
enquiries-export.csv	24 rows of made-up enquiries. One business appears twice, on purpose.
monthly-numbers.csv	Six months of made-up enquiries and discovery calls.
client-reviews.csv	Made-up reviews with permission flags.
website-brief.docx	The starter brief: audience, sections, tone and definition of done.
deck-brief.docx	The six-slide capability deck, slide by slide.
assets/northstar-logo.png	Fictional logo.
assets/northstar-hero.png	Fictional hero image for your site.

Steps

Step 1. Teach Spark your voice with a skill (8 min)

Where: Gemini → Customize → Skills → Create → Create manually

Open northstar-writer-skill.txt. Paste the name, description and instructions into the three fields and save. Then test it: in a new task, type @ and pick the skill.

PROMPT · COPY FROM THE LAB PROMPTS PAGE

```
@northstar-writer Write one sentence for our homepage about who we help.
```

Expect: One plain sentence, using only approved claims. It refuses if you ask it to state a price.

You decide: If it drifts, fix the instructions and not the sentence.

Step 2. Sheets: turn a messy export into a dashboard (12 min)

Where: Gemini → Task, then Google Sheets

Attach enquiries-export.csv and monthly-numbers.csv and paste the prompt. Open the Sheet. Count the rows yourself and click into a formula.

PROMPT · COPY FROM THE LAB PROMPTS PAGE

```
Create a Google Sheet named Northstar-Launch-Dashboard in my Gemini Spark
Workspace/Northstar folder with three tabs.
Leads: one row per business, merging duplicates, from the enquiries export.
Summary: live formulas counting leads by service and by source, and the average days to
first reply.
Trend: the monthly numbers with a chart of enquiries and discovery calls.
Tell me how many rows you merged and which ones.
```

Expect: 23 leads, because Bukit Bakes appears twice. Trend still shows 24 enquiries, because it counts emails and not businesses. Summary cells are formulas, not typed numbers. A chart sits on Trend.

You decide: Your count must match Spark's. If it says 24, your rule was not followed.

Step 3. Slides: build the capability deck from the Sheet (12 min)

Where: Gemini → Task, then Google Slides

Attach deck-brief.docx, the logo and the inventory, then paste the prompt. Open the deck and read every slide as a client would.

PROMPT · COPY FROM THE LAB PROMPTS PAGE

```
@northstar-writer Create a Google Slides presentation named Northstar-Capability-Deck in
my Gemini Spark Workspace/Northstar folder, following the attached deck brief.
Add the attached logo to the first slide. Add the enquiries chart from the Trend tab of
Northstar-Launch-Dashboard to slide 5.
Use only approved claims from the inventory. No prices. No promises of results.
```

Expect: Six slides, the logo, and the real Sheets chart on slide 5.

You decide: Ask for one concrete change, such as a shorter title on slide 2, and check Spark changes only that.

Step 4. Docs: write the site copy with its sources (8 min)

Where: Gemini → Task, then Google Docs

Attach website-brief.docx, client-reviews.csv and the inventory, then paste the prompt.

PROMPT · COPY FROM THE LAB PROMPTS PAGE

```
@northstar-writer Create a Google Doc named Northstar-Site-Copy in my Gemini Spark
Workspace/Northstar folder, following the attached website brief: hero, services,
approach, proof, contact.
Use only reviews marked permission = yes, with no surnames.
End with a table listing each claim and the inventory row or file it came from.
```

Expect: Five sections and a table tracing every claim to a source. The review without permission is left out.

You decide: Strike any claim you cannot trace. This Doc is what goes on your website.

Step 5. Sites: build the website yourself (15 min)

Where: sites.google.com

Spark cannot edit Google Sites, so this part is yours. Create a blank site named Northstar Studio. Add the logo and hero image, and paste your five sections from Northstar-Site-Copy. Insert your Northstar-Capability-Deck with Insert → Slides, and the Trend chart with Insert → Charts. Add a contact button labelled Request a 20-minute discovery call.

Expect: A one-page site with your approved copy, the embedded deck and the live chart.

You decide: Publish only if you are happy for it to be public. A preview link is enough for this lab.

Step 6. Test it at phone width and take your evidence (5 min)

Where: Google Sites Preview, then Chrome

Click Preview and open the site in a Chrome tab. Press F12 (Mac: Option+Cmd+I) and click the device toolbar icon to pick a phone. You are only using Chrome's built-in view here. No code, no install.

Expect: Text is readable, the menu collapses, the button is visible, and the deck still fits.

You decide: Take the PP Task 2 screenshot only when you would show this page to a client.

Checkpoint

> All five outputs use only approved claims, the lead count is 23 and not 24, and no price or results promise appears anywhere.

Assessment evidence

PP Task 2: ONE screenshot of your finished website in the browser with the Chrome device toolbar set to a mobile viewport.

If you finish early, or after class

- Ask Spark to compare the live text of your site against the inventory, row by row, and list any mismatch.
- Ask Spark to add a Sheets chart showing leads by source to Northstar-Site-Copy.

If Spark does not behave as described

Menus move and results vary, so this lab states what to expect and not exact wording. Check the source in Google Help, tell your trainer, and record what you actually saw. No Pro or Ultra account in class? Pair with a neighbour and complete the Docs, Sheets and Sites templates by hand.

All company data in this lab (Northstar Studio, people, enquiries, reviews, numbers) is fictional and generated for training.
